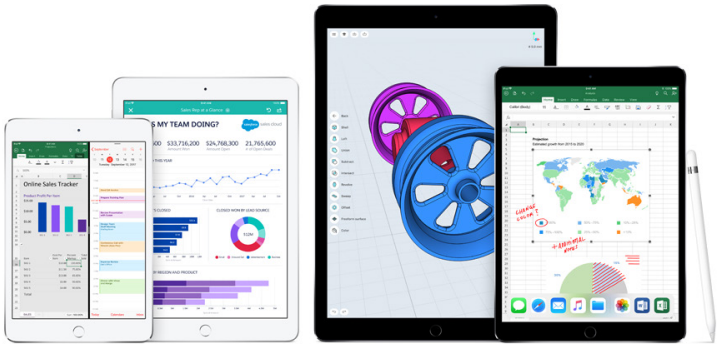
Best-in-Class Services: Mobility Automation for Apple



Transform your iOS deployment

Mobility Automation for Apple streamlines large-scale iOS® deployment, increasing efficiency and reducing human error. It's designed to help you eliminate manual device configuration, time-consuming device setup and troubleshooting. Leveraging Insight's Mobility Automation services will enable you to provision devices out of the box, restore devices to a known state in shared deployments and assist in troubleshooting devices in the field.

A modern approach to automation

Insight delivers compelling automation services and meaningful outcomes for iOS deployments across a wide range of industries, including retail, hospitality, healthcare, food services and government. We can help you:

- Fully automate a zero-touch workflow.
- Accelerate deployment and minimize errors.
- Enable device setup for shift workers and shared device deployments.
- Reduce help desk tickets.
- Efficiently provision and manage devices and data.
- Simplify migration to a new device and/or new Mobile Device Management (MDM) solution.

Insight + Apple
Manage today.
Transform the future.
Together.

Delivering modern iOS management

Our team of Apple® experts, in conjunction with Apple Professional Services, will work to design automated workflows for your business. We base the design on your unique configuration requirements and business processes, resulting in the automated provisioning and refresh of your devices — so they're ready to deploy at any moment. Eliminate configuration time and remove break-fix processes with an always-on model that gets your team up and running from the first touch.

- Improve process efficiency by taking advantage of the latest device automation tools, including Apple Provisioning Utility (APU), Apple Business Manager, per-device app assignment, MDM Apple Configurator 2 and more.
- Deliver market expertise on automation best practices to enable simplified shared device and one-to-one device deployments.
- Automate deployment to remove the burden from IT teams or end users.
- Implement caching services to optimize bandwidth and speed software updates and installation.
